

SaaS solutions for access control and time recording

State-of-the-art technologies to protect your data

Regular updates are important

What to do if the company lacks the resources to permanently protect itself against unauthorised access such as cyber attacks?

With Software-as-a-Service from Primion, important company data is absolutely secure by being hosted in a German data center.

At the same time, the applications for access control and time recording are available without restrictions around the clock.

Cloud solutions from Primion not only offer regular updates and state-of-the-art technologies to protect sensitive data, they also significantly reduce costs and effort.

More than 150 companies in Europe already rely on Primion's innovative and transparent cloud services to optimise their business processes.

To protect people and values.

Secure cloud solutions

Highest performance with transparent costs

Software as a Service (SaaS) is a licensing model with which Primion centrally hosts your access control and time recording software and makes it available to your company around the clock.

Primion is therefore responsible for reliably maintaining operations and maintaining the software.

This relieves you: the effort for administration, IT effort and energy costs are reduced massively. Moderate, precisely defined monthly fees (OPEX) replace immediate large investments (CAPEX).

This makes planning much easier and creates space for new investments.

Take advantage of the many advantages and concentrate on your own core business!

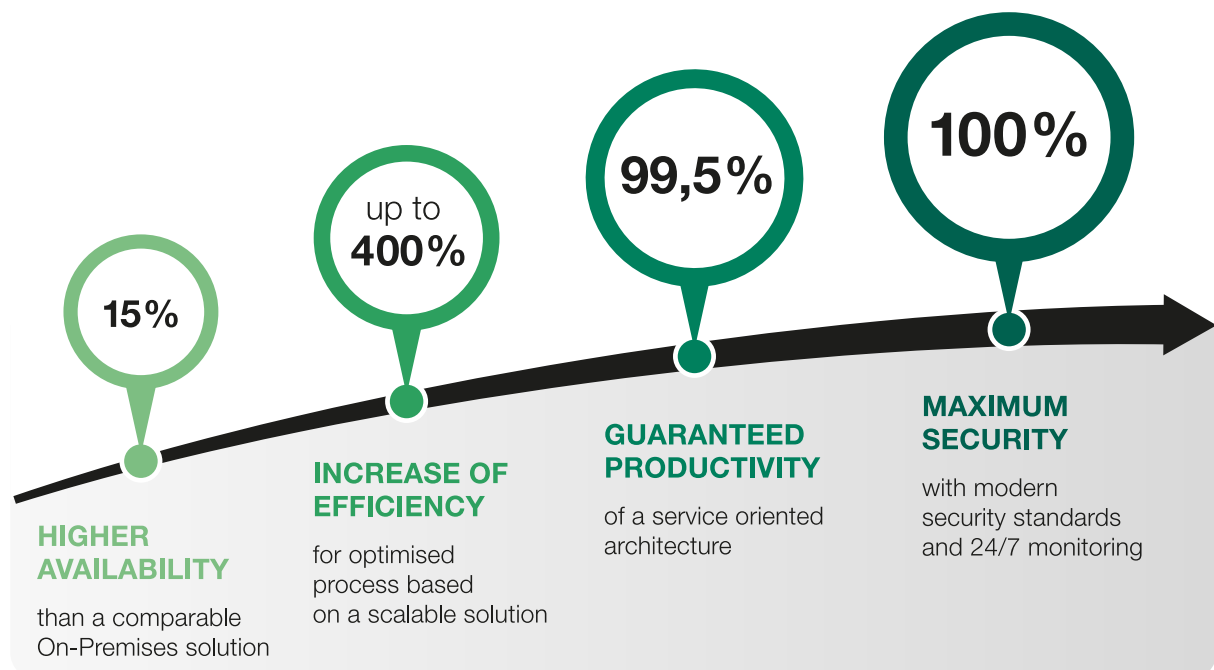

Maximum availability for optimised processes

State-of-the-art standards for increasing performance

Optimise your internal company processes by switching to our innovative SaaS solutions now. This applies to the entire hardware as well as

the software for prime WebTime, prime WebAccess, prime Mobile and the prime Visit visitor management system.

- Immediately available solution
- Regular maintenance of the server including all updates
- Short contract term and ability to scale down
- Continuous development of the application
- Professionally managed solution (availability)
- Access to all data at any time

Security through hosting in a German data center

Optimise your access control and time recording solutions

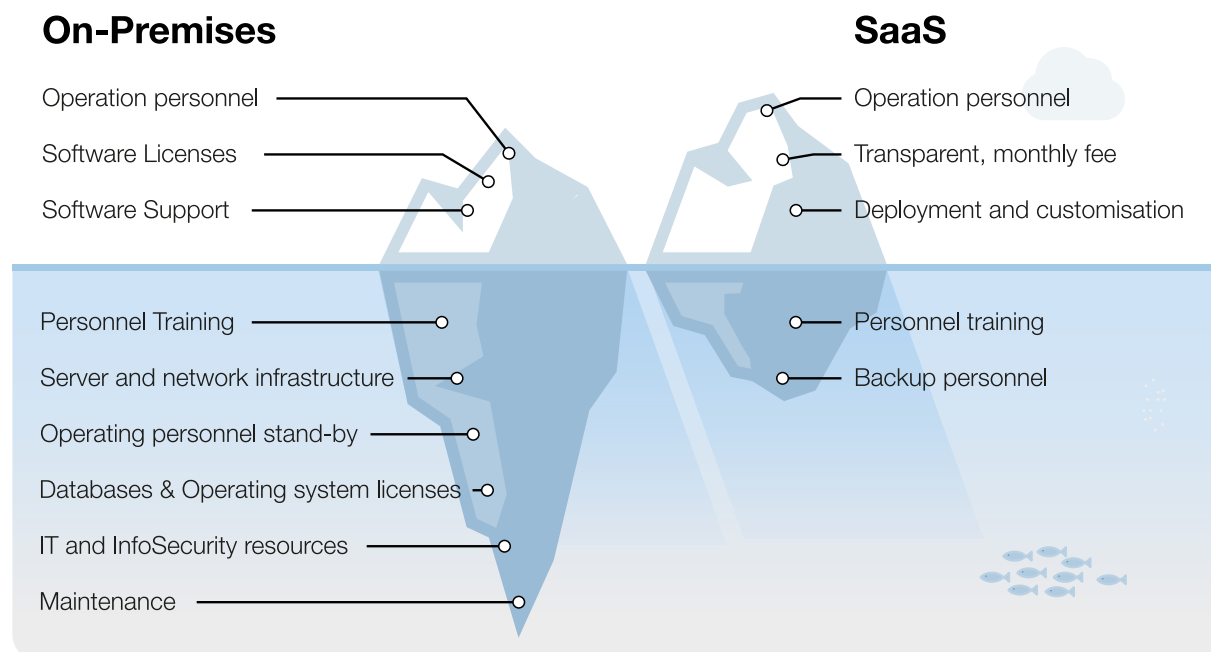

The Primion SaaS applications are particularly secure because they are hosted in a data center based in Germany.

Primion also acts in accordance with the Cloud Computing Compliance Criteria Catalog (C5) of the Federal Office for Information Security (BSI).

The BSI sets high standards and benchmarks in the market. The compliance processes are generally recognised by federal authorities and are comparable to organizations such as the NIST (National Institute for Standards and Technology) in the USA and the NCSC (National Cyber Security Center) in the UK.

Software-as-a-Service offers numerous advantages over on-premises solutions.

- No server room, no cabling, no cooling, no electricity costs
- No costs for servers and storage space
- No licenses for Windows or others
- No IT administration costs
- No immediate major investment for the customer (CAPEX). Instead, moderate, precisely defined monthly fee (OPEX).
